Classic Libra

Twin-head cutting-off machine

The Emmegi twin-head cutting-off machines boast of exceptional performance characteristics, including ruggedness and reliability. This machine is the ideal tool for cutting aluminium and PVC bars in various thicknesses and at different angles. Latest generation machines which can make a considerable contribution to the production cycle thanks to their high standard of accuracy and user-friendliness. Classic Libra is an electronic twin-head cutting-off machine with automatic traversing of the moving cutting head. The machine can be provided with an industrial label printer to enable profile identification and association with relative job.

Digital readout for intermediate angles

01 Control

The user-friendly control panel installed on the various models, runs on bearings and allows correct positioning of the moving cutting heads according to cutting specifications. The work cycle is optimized through creation of the cutting lists thus reducing scrap as well as workpiece loading/unloading times.

02

Tilting of the moving cutting heads

Rotation of the heads about the horizontal axis is powered by pneumatic cylinders. External angles from 90° to 45° can be obtained from machines fitted with 450 mm diameter blades. Using 500 mm blades, it is possible to obtain external angles from 90° to 22°30'. Intermediate angles can be obtained by using the appropriate manually adjustable stop. The moving cutting heads are fully guarded in the work zone and lowering of these guards is pneumatic.

03

Digital readout for intermediate angles

When there is pneumatic tilting of the moving cutting heads, the intermediate angle readout allows exact identification of the tilting of the cutting head, thereby ensuring accuracy of the cut profiles. This device, which is specially useful in making cuts at intermediate angles, allows the operator to identify the required angular setting quickly and accurately.

04

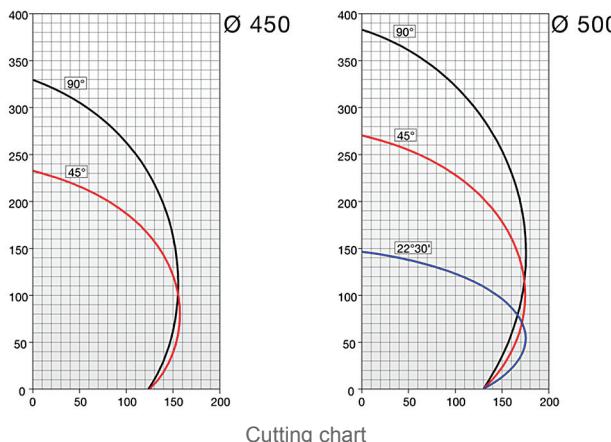

Electronic profile thickness gauge

This sophisticated profile thickness control system allows automatic correction of the cutting dimension in relation to the actual size of the profile, with relative tolerance derived from surface treatments such as painting, anodization, etc. The device can be used at the operator's discretion and in various modes, according to different probing cycles, with consequent correction of the entire cutting list, including the formula of the macro.

05

Intermediate support

The pneumatic intermediate support proves highly useful when cutting light profiles with considerable lengths. In such case the pneumatic support automatically seeks to create the ideal condition to support the profile. This accessory is available for all lengths, but it is especially recommended on machines with cutting capacity of 5 and 6 metres.

Cutting chart

CONTROL CHARACTERISTICS

6" LCD graphic monitor

Provision for connection to industrial label printer

USB port

Provision for connection to remote PC via USB, network or serial port (optional)

Execution of single cuts

Memorization of 99 profile compensations with automatic calculation of the size for angle cuts

Memorization of 20 cutting lists (each with 50 lines) via keyboard

Memorization of 25 cutting lists (each with 100 lines) via cable from external PC through RS232 board

Creation of 100 window styles (1500 formulae) downloadable on USB

MACHINE CHARACTERISTICS

Measurement of moving cutting head position via direct measuring system with magnetic tape

2 carbide-tipped blades

Full guard for cutting zone, pneumatically operated

Pair of horizontal pneumatic clamps with "low pressure" device

Profile support roller conveyor

Lubrication system, spray-mist lubrication with oil and water emulsion or minimum quantity oil lubrication (depending on version)

Manual profile support

Provision for automatic start of swarf exhauster MG4

Electronic profile thickness gauge

Pair of standard counterblocks

Metric scale

Cutting capacity 4/5/6 m depending on model

Blade motor power rating (kW)

2.2
